Singapore

NUS Computer Engineering undergraduate with industry experience in testing and troubleshooting real production systems. Strong in C/C++ and Python, comfortable in Linux, and used to working with different teams to deliver reliable results. I bring both hardware and software context, which helps me build more holistically dependable systems.

EDUCATION

NATIONAL UNIVERSITY OF SINGAPORE (NUS)
August 2024 – April 2027

BACHELOR OF ENGINEERING IN COMPUTER ENGINEERING (HONS)

- Software Engineering; Computer Architecture; Embedded Systems; Operating Systems; Data Structures and Algorithms; Cybersecurity

TEMASEK POLYTECHNIC
April 2018 – March 2021

DIPLOMA IN AEROSPACE ENGINEERING

- Systems-Level Design Mindset; Rapid Prototyping and Hardware Integration

---

SKILLS

- **Programming**: C, C++, Python, Java, Rust
- **Low-level and Hardware**: Verilog, ARM Assembly, Bare Metal Microcontroller Programming
- **Systems**: Linux, Object Oriented Programming
- Computer-Aided Design (CAD)
- Critical Thinking & Problem Solving

EXPERIENCE

APPLICATIONS ENGINEER - SEMICONDUCTOR DEVICES
March 2024 - August 2024

IN.D SOLUTION [COMPONENT TECHNOLOGY]

- Built and tuned machine vision inspection “recipes” in visual IC inspection software to validate devices on leadframes.
- Translated customer inspection requirements into measurable checks and parameters, then validated performance through internal testing and simulated on-site trials.
- Worked with internal engineering teams on new feature rollouts by supplying test cases, reproducing issues, and verifying fixes across software and hardware updates.
- Supported Sales, Engineering, and Manufacturing teams with technical troubleshooting, demos, and project reporting.

ASSOCIATE ENGINEER - SEMICONDUCTOR DEVICES
October 2021 - September 2023

STATS CHIPPAC [JCET GROUP]

- Applied sharp troubleshooting skills at the semiconductor die level, implementing corrective measures for improved yield.
- Collaborated closely with product engineers to ensure semiconductor devices met stringent quality and yield requirements
- Took initiative in data collection, providing valuable support for issue resolution and contributing to continuous improvement initiatives.
- Directly communicated with customers, providing valuable insights and updates on semiconductor device testing and issue resolution.

DESIGN AND MECHANICAL ENGINEER (INTERN) October 2020 – March 2021

TEMASEK POLYTECHNIC AVIATION RESEARCH CENTRE

- Assisted in fabrication of commercial drone prototypes, supporting end to end build and iteration cycles.
- Operated 3D printing, laser cutting, milling, and hardware assembly to produce mechanical components.
- Created and refined 3D models in PTC Creo to meet fit, tolerance, and assembly requirements.
- Supported supervisors to produce accurate UAV documentation and build coordination.

CO-CURRICULAR ACTIVITIES & INTRESTS

- Exploring emerging innovations in the field of technology and physics
- NUS Recreational Volleyball Club
- Former Sports Director and school volleyball team captain in secondary school
- Playing music (guitar and piano)
